

Gomocha FSP Portal: Asset Data Audit Trail

Last updated by | David Mishler Gomocha | Oct 1, 2025 at 11:45 AM GMT+2

Gomocha FSP Portal: Asset Data Audit Trail

 42341 As an Organization I would like changes to the Asset data to be audited | Done

Description

Efficiency

- Track Every Asset Change with Complete Visibility

What it is

- Asset Data Audit Trail

What it does

- Automatically records every change made to asset information, tracking who made the change, when it happened, what was modified, and which system was used (Portal, Customer Portal, Gateway API, or Flow Transition).

Why it Matters

- When asset data changes unexpectedly, you need to know who changed what and when. Without audit trails, troubleshooting becomes guesswork and accountability disappears. Critical asset information can be modified without anyone knowing why or by whom.

Value

- Complete visibility into asset data changes
- Clear accountability with user and system tracking
- Faster troubleshooting of data discrepancies
- Compliance support with immutable audit records
- Historical view of asset evolution over time

Where it Fits in Gomocha FSP

Usage Steps/Output: Gomocha FSP Portal

- Go to **Gomocha FSP Portal**.

- Navigate to **Asset Management > Search Assets**.
- Select the desired **Asset**.
- In the **Asset Details** page, note the new **"Show Asset History"** button.
- Edit the asset as needed and **Save** your changes.
- Click **"Show Asset History"**.
- In the **Asset History** pop-up, review the list of changes made to the asset, along with their timestamps.
- Click the **"+"** button next to a change date to expand and view the **before-and-after details** of that change.
